WORK EXPERIENCE

SOFTWARE ENGINEER
KARDIACHAIN - WHYDAH | Apr 2022 - Now

Build a marketplace for exchanging NFT. See detail at https://agoran.io/
Build a platform for hosting an event marathon on metaverse (https://raramuri.io/).
Main responsibilities:
- Lead Unity team (3 members) to create a 3D race on WebGL for Raramuri.
- Optimize file size and avoid memory leaks on the Unity 3D app.
- Implement features on the client side and fix some bugs for Agoran Marketplace and Raramuri.
- Collaborate with other teams to solve challenging issues.

Technologies used: React JS, Next JS, Unity, Solidity, Hardhat, ...

SOFTWARE ENGINEER
BOSCH | Nov 2021 - Apr 2022

I'm joining the internal Bosch project as a full-stack developer. This project builds a website to support factories to manage and coordinate their products.
Main responsibilities:
- Get and analyze requirement from product owner
- Implement new features and fix issues
- Report status daily to foreign team

Technologies used: Angular, Java Spring Boot, React, Node JS, Jenkins, Jira, Git.

SOFTWARE ENGINEER
TMA Solutions | Feb 2021 - Nov 2021

I worked on a project that protects users from malware, viruses by the way using the isolating method between users and website.
Main responsibilities:
- Get and analyze requirements from the project manager.
- Collaborate with other teams to complete an assigned feature, resolve the challenging issues.
- Implement a new UI and API for some features.

Technologies used: Angular, Python 2.7/ Framework Tornado, VS Code, Jira, Bitbucket, Linux OS, Git

SOFTWARE ENGINEER
Tanca | Apr 2020 - Sep 2020

This project provides software for customers to manage HR effectively. Their employees can check-in/out of their shift by mobile phone or AI Camera.
Main responsibilities:
- Write some APIs such as list-request, notification, survey,...
- Fix bugs and modify APIs according to customer requirements

Technologies used: VS Code, Postman, Sourcetree, PHP Framework Lumen
